Tulsa Garden Center
at Woodward Park

“Survival During a Mast Year”

by *Laura Chalus, CEO, Tulsa Garden Center at Woodward Park*

The expansive wooded property is dominated by oak trees, and as we wandered around in a zombie-like daze that fall, the masses of acorns underfoot crunched and popped, fraying our already-raw nerves.

We went through our ritualistic deer season preparations of filling feeders, erecting ground blinds, and searching for rubs, while sporadically reminiscing through blurry eyes and trying to find meaning in what had happened. Lives forever scarred, future dreams abruptly altered, and to what end?

Norman had lost his best friend, his confidant, and his hunting buddy since high school. Then within 9 days, and unfortunately on Norman’s birthday, we would also lose my sister-in-law to complications from a COVID infection. The harsh realities of the world felt like they were closing in around us and we were struggling to keep it together, most days unsuccessfully.

But the woods were where we found solace, along with so many memories of happier times, so when we felt them beckoning to us with their bird calls and bronzing leaves, we followed.

The snow finally fell and once again we were back amongst the oaks diligently checking game trails and refilling feeders. Because there were so many acorns covering the ground, we were mostly seeing wild pig tracks since the deer had plenty of their preferred food to eat and weren’t interested in corn. Nonetheless, we drove around to each feeder adding game bait and looking for signs. Any signs. We desperately needed to see the signs.

In the waning sunlight, Norman backed the side-by-side up to my designated feeder and stood on the tailgate to reach the wide lid of the 55-gallon drum. As his assistant, I dutifully reached out to hold and steady the two closest metal tripod legs supporting the drum’s weight, reaching a full height at about 8 feet.

With my hunter-orange stocking capped head bent down marveling at the abundance of acorns on the ground, Norman began to remove the feeder lid just as I felt an ice-cold droplet hit the back of my neck. I didn’t even have time to utter a sound when suddenly the lid popped loose and down rained all of the wet slushy snow which had accumulated on top of the lid, splatting directly on the top of my head.

With my mouth agape and eyes wide I slowly looked up at him, and a split second later he erupted in the most hilarious laughter I think I have ever heard. I couldn’t help myself and joined in on the hilarity until we both laughed so hard that our eyes watered. Suddenly his face twisted, and he broke down in heart-breaking tears from the cruel realization that we would never again share a story with his friend around the campfire.

We both cried with a much needed release of emotions, and just as we had no tears left, a slight smile formed on his sleep deprived face. He chuckled a bit and mused about the sound of his friend’s signature guffaw, never to be heard again, but

which would have most assuredly reverberated throughout the woods upon hearing about my unexpected snow shower.

We spent a lot of time in the woods that year, deep in reflection and thoughts of better times, but our conversations always seemed to come back around to wondering about the crazy number of acorns we were seeing. I had never even heard of a mast year at that point but was certainly experiencing one even if I didn't have a name for the phenomena.

Knowing now what I know about mast years, though, it only seems fitting that the trees had spent the entire summer putting all their energy into creating a profusion of acorns, much more than could ever be eaten by the deer, hogs, squirrels, or other critters. Their strategy was to flood their environment in hopes that a few tiny nuts would escape the carnage, eventually growing to their full height of maturity.

Just as so many of the trees in Woodward Park stand as witnesses to injustices of the past, those surviving woodland trees, born during a time of tragedy, will be there long after we're gone with the truth of what happened that year locked away forever within their hearts. 🌿

If you or someone you know is in crisis and needs immediate help, call or text 988 to connect with the 988 Suicide & Crisis Lifeline. The Lifeline provides 24-hour, confidential support to anyone in suicidal crisis or emotional distress.

Weathering the Winter: Houseplant Care

by Andy Fusco, Director of Horticulture, Tulsa Garden Center at Woodward Park

Winter blew in about as quickly as this year's Father's Day storm, wrapping up a year of weather extremes. Our first frost (low temperature at or around 32 degrees Fahrenheit) was later than the past couple of years, occurring right around the average date of Halloween, but our first killing freeze (low temperature below 24 degrees) hit our gardens that same week, well ahead of the average date of Thanksgiving. Most of our garden plants will not be harmed by this snap, but it may mean we don't get the usual fall color we're used to. For example, the leaves on the Ginkgo tree in the Arboretum turned brown and fell off well before they turned the majestic yellow that is typically synonymous with Fall in Woodward Park. This fast frost also meant we had a few busy days in the Teaching Garden, making sure everything was buttoned up for season's end.

The first frost always makes for a mad scramble for us gardeners and I often find myself underprepared for the big move inside. I have a large houseplant collection at home and I always underestimate how much the plants have grown over the summer, not to mention the new specimens that I've added over the year. I have to get very creative to make sure there's enough space for everything because placement within the home is crucial to ensuring they thrive over the winter. We're lucky in the Teaching Garden that we have a small greenhouse as well as staff and volunteers that can move our large

plants outside on nice days. Without those resources, most of us will need to keep a few things in mind to keep our houseplants happy.

Most common houseplants are native to tropical regions and thrive in the understory of rainforests. Adaptations to these low light conditions are precisely why they do well indoors. However, the amount of light they receive in their native habitats is still well above what gets inside our homes. Many modern windows are designed to reduce the UV radiation that reaches the interior of the home. This is great for energy efficiency, but not so great for the plants that thrive on those light wavelengths to photosynthesize. Rooms on the south side of the house receive the most light in the winter so, if possible, place the most light-loving plants in those rooms.

East and west facing rooms are the next best, but north facing rooms should be avoided or will need supplemental lighting.

LED technology has advanced tremendously over the past 10 years and there are a lot of affordable plant light options now on the market. When shopping around for a plant light, it's important to remember that our goal is to keep our plants healthy through the winter, not to induce flowering or fruit. Avoid bulbs or ballasts designed for growing vegetables or flowers from start to finish. These lights are much more expensive and are designed to be used in environments where the plants never see the outdoors, such as a hydroponic grow house. A full spectrum light set on a timer for at least 12 hours a day is enough for most houseplants in the darker corners of a home.

CONTINUED ON PAGE 6

Weathering the Winter: Houseplant Care

CONTINUED FROM PAGE 5

With shorter days and less light, our houseplants' growth rate will slow down dramatically and the rate at which our plants need water will decrease accordingly. Most of the problems I see in houseplants over the winter come from overwatering. Plants like Snake Plants, cacti, and Sago Palms may only need watered once or twice through the whole winter whereas Ficus, Monsteras, and other large leaf plants may need water as often as once a week, but just like in an outdoor garden, plants will show signs they need watered. If the soil is moist within the first couple of inches, a plant has plenty of moisture.

Exact watering rates will be dependent on the humidity, light levels, and temperature of a specific room. Plants near air vents and fans will dry out a lot quicker than those in a humid bathroom. Drafty windows and areas near exterior doors are also places to avoid as plants can be damaged by the cold air that gets let in each time the dog wants out.

Keeping these few simple tips in mind will make sure plants thrive through winter. When the gardens are dormant, it's nice to have some green in the house. It feeds the soul! 🌿

An Affinity for African Violets

by Roy Roberts, November 2023

African Violets, one of the most popular house plants, are easy to grow and add beauty to any environment. They come in many sizes to fit any growing environment; from plants that are 3-4" in diameter to those beautiful giants that may reach 18-24" in diameter. Their foliage ranges from light to deep green and includes many varieties that have variegated leaves, but the best part of growing African Violets is when they bloom.

African Violets like a porous potting mixture that does not hold too much water. A soilless mixture of primarily peat moss with some perlite and/or vermiculite works great. African Violets need 8-10 hours of bright light, but not direct sunlight as this will burn the leaves. Make sure they get time to rest with at least 8 hours of darkness. One key to getting your African Violet to bloom is to make sure the pot is not too big. So, a good rule of thumb is using a pot that is 1/3 to 1/4 the size of the plant. For example, a Standard sized plant that is 12" in diameter should be in a 3" to 4" pot. Miniature or Semi-miniature African Violets can usually grow in a 2" or 2.5" diameter pot.

African Violet Plant Sale
February 24th, 2024
9 a.m. - until sold out
Tulsa Garden Center

The African Violet Society of Greater Tulsa is an organization that enjoys helping others to grow these wonderful plants and other gesneriads.

If you can't make it to a meeting, but still have questions, you can contact us through our Facebook page, www.facebook.com/AVSGT.org. Another source of information and tips on growing African Violets is the National Organization, African Violet Society of America (AVSA), <https://africanvioletsocietyofamerica.org/>. 

We Love Our Tulsa Parks!

by Pat Hobbs, Tulsa Garden Center Accounting Manager
& John Orsulak, Class 12 Teaching Garden Volunteer

For 30 years, John Orsulak and I lived on Rockford Avenue, just across the street from the Anne Hathaway Herb Garden. What memories we made – walking our Westies in the park, following Tulsa Parks Staff Gardener Georgie’s timeline for planting in the Upper Rock Garden, observing photo ops (and learning if it was a sequins-or-satin fashion year during prom season), and enjoying all four seasons – right across from our own front yard. John even became certified (Class 12) and continues his work as a Teaching Garden volunteer.

During the construction of our new home in Heartwood Commons, Tulsa’s first 55+ cohousing community, we transitioned to downtown living in the TransOK-Art Deco Lofts in the Deco District just across the street from another Tulsa park, Chapman Green.

The last two seasons have not been kind to our parks, especially with the extreme heat, cold and storms. Having spent two seasons watching the deterioration of the park from our 5th floor view, this year we encouraged a partnership with the Tulsa Garden Center and Tulsa Parks Department to do some renovation of the overlooked pocket park. The results of our workday on June 15th are tremendous. Native grasses and drought-tolerant perennials now fill the raised beds, the park is now maintained on a regular basis, and activity has returned! The Downtown Tulsa Partnership successfully sponsored the first MidWeek Market for ten weeks this fall. It will resume in the spring. Movies and live entertainment now fill Chapman Green, and more recently, Chapman Green was used as a movie location.

When the park was dedicated in 2008, then Tulsa Mayor Kathy Taylor said, *“The H.A. Chapman Green is a crown jewel in our ongoing efforts to revitalize downtown Tulsa.”*

We love our Tulsa Parks and are grateful we play a part in Keeping Tulsa Beautiful! 

Picture Perfect

@SidawiTwins photos
by Makayla Johnson

Woodward Park is a photographer's dream. Natural backdrops, historic buildings, garden cats, water features, and the friendliest squirrels in town provide ideal photo opportunities around every corner.

Family photos, senior portraits, anniversaries, weddings, milestones, or engagements are all popular reasons for capturing a moment in time in Woodward.

By purchasing a Park photography permit, you gain special discounts and preferential access to unique locations. You'll also be supporting the beautification of Woodward Park - one of Tulsa's most historic and cherished public spaces.

Day passes (\$25) and annual passes (\$250) are available for photographers of all kinds. tulsagardencenter.org/photography-permit

A Whimsical Woodward Win

All American Selections Second Place Award, Category 2: 10,000-100,000 Visitors

When the theme for this year's AAS Design Contest was announced, the volunteers and staff at the Teaching Garden at Woodward Park knew exactly what they wanted to do: build living sculptures of giant koi fish. The garden's koi pond is a visitor favorite, so it seemed fitting to pay tribute to the beloved inhabitants with this whimsical display.

AAS Winners were planted into the sculptures, and the finishing touches of fins, tails, and eyes were added. Now, four giant colorful koi fish swim amongst boulders in a pond made of Blue by You Salvia, Vertigo Deep Blue, and Summery Love Torenia. Candle Fire Okra and Goldilocks Squash stand in for cattail and waterlily. The four fish are planted with Holi Scarlet Zinnia, Bicolor Red and Yellow Profusion Zinnia, Bees Knees Petunia, or Wave Carmine Velour Petunia. 🌿

Being Taught by the Teaching Garden

by Griffin Ryker, 2023 Teaching Garden Summer Intern

My internship at the Teaching Garden was excellent. I learned the ins and outs of running a public garden space, working with volunteers, and how to be flexible.

My daily activities included pulling weeds, plant maintenance, mulching, cleaning pond filters, and watering every day. The Teaching Garden was a great space to work in; you can do a lot in a manageable space. I never felt overwhelmed and always knew I could ask for help when needed.

The gardens alone are beautiful. There is always something to look at and photograph. There are many plant specimens that blend well with color, texture, height, and blooms. It is a great outdoor getaway to find inspiration and beauty in a small area. The Koi Pond is a big attraction, and rightfully so, with a stunning display of lotus and of course the koi fish.

One of the best parts of my internship was working with the volunteers. They are a joy to be around because they share the same passion for gardening and digging in the dirt. The volunteers go above and beyond such as climbing rocks to pull weeds and accomplish any task that is given. Volunteers are the backbone of the gardens.

The staff at the Teaching Garden is kind and generous with their knowledge. I could not ask for better co-workers. They helped me discover new techniques and made learning fun. With these new experiences, I have a deeper appreciation for the level of care and detail that go into functioning gardens.

This internship exposed me to all different plants and plant care. It was an eye-opening experience. Overall, I had a blast working at the Tulsa Garden Center Teaching Garden at Woodward Park.

The amount of education and beauty that space allows makes me giddy. I will always have the confidence and satisfaction that the garden is doing its job, and we are doing ours. 

The summer internship position is only possible through private donations. If you would like to contribute to the Teaching Garden Internship program, please contact Jenna Garland at jgarland@tulsagardencentral.org.

What would you tell Woodward Park if given the chance?

Share your own
Woodward Park
stories, memories,
and thoughts at

myspot@woodwardparktulsa.org

I lived over in Maple Ridge and we came on our bikes to fish in the 50's. We tried to catch goldfish but they went into a little cave. Also, there's a monolith with a little slit in the top and we were told Shakespeare was buried there. So, we kept looking in the slit. Never saw him. - Jimmy

Where to begin? One of my favorite places on earth is Woodward Park. It holds so so many memories. They all began on March 25, 2006 when my (now husband) boyfriend proposed in front of the azaleas. It was the most perfect spring day. In 2009, my dreams came true when we moved to a beautiful historic home one block from the park on 26th street. For the next 13 years, we walked thru the park every night. We took so many candid pics of our children playing in the park. We religiously attended Wine and Roses. My sweet boys and I went to every single Story Time at the Garden Center. We flew kites on the lawn of the historic center. We recently moved to a home in west Tulsa and it broke my heart. Woodward park will always be my favorite place. And one day I will move back. - Katie

I lived a couple blocks from the Park and we went down there to play all the time. I learned to throw a frisbee there in 1993. - Alex

Care for Christmas Wreaths

by Kathi Blazer, Tulsa Garden Club President

I receive one gorgeous Christmas wreath annually and work to keep it that way. Here's what I do, and Martha Stewart approves.

1. Condition branches to rehydrate. Before making wreaths or garlands, fill buckets with room-temperature water. Using a hand pruner, make diagonal cuts through the stems (this allows more water to be absorbed), then gently crush the exposed end with a small hammer. Set them in water for a few hours before working with the plants. I soak my premade wreath overnight in the bathtub.

2. Hang Your Wreath Outside. If you plan on hanging a live wreath indoors, reconsider, because it will last much longer outside than in a heated home. You can bring it in to 'visit' for special times, then mist and return outside. Keep your wreath out of direct sunlight, It can last up to 8 weeks if out of the sun and misted regularly.

3. Apply Water. Spritzing or misting your wreath with water regularly is essential—and will prevent your piece from turning brown. We recommend spritzing the back of the wreath (where the cut ends of the boughs are) every two to three days.

4. Cover the Wreath at Night. Cover its face with a lightweight plastic bag at night, like a trash bag, You can just tuck it around the outside of the wreath and keep it hanging and easily remove plastic the next morning.

5. Try an Anti-Transpirant Plant Spray. Once you've conditioned the cuttings, treat them with an antidesiccant spray, which is available online and at local garden centers and nurseries. This seals the pores on the leaves and bark and helps the foliage retain moisture.

Growing The Arboretum Together

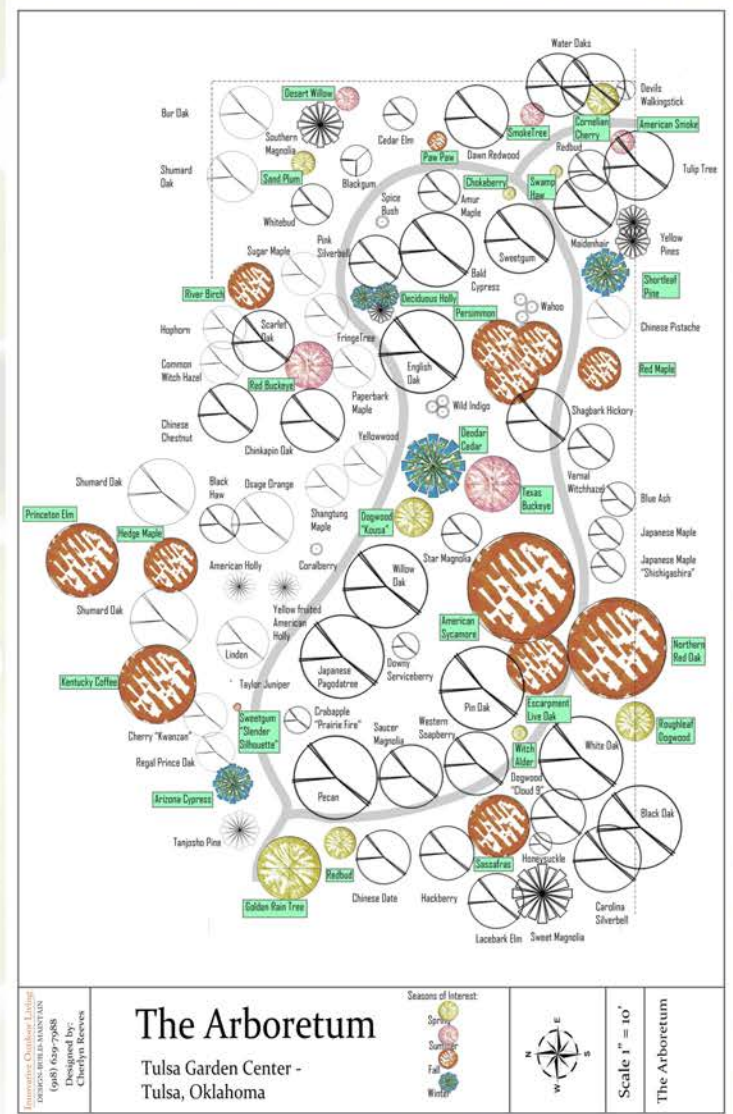

The Arboretum Needs Your Help

Originally funded by the Tulsa Garden Center in 1964, the Arboretum at Woodward Park is a treasure that has been loved by all of Tulsa for almost sixty years. It has given us a space for reflection, for learning, for shade, for fellowship, and for cohabitation. Its quarter-mile walking trail guides countless families, students, and canines through a wide variety of trees that can grow in Oklahoma. It's a gift for everyone right in the middle of Tulsa. It's time we gave back to it.

The Arboretum has been in need of restoration for a long time and that need has been enhanced after the recent wind storm that swept through northeastern Oklahoma. Plans for this necessary Arboretum restoration have been in progress for the past few years. Now more than ever, the Arboretum needs your help.

The plans for the project include the replacement of lost or dying tree specimens, expansion of the overall tree collection, and an irrigation system. The new irrigation system has been funded and work will begin on its installation in the coming months. Now is the time to select from our long list and sponsor a new tree in The Arboretum. Or perhaps you feel called to make a donation in memoriam of the downed Pin Oak and Black Oak.

All levels of support are possible and every contribution makes a difference. To learn more about ways you can support this growth, visit www.tulsagardencentral.org/tulsa-arboretum.
